

The storage containers of the C series are completely made of stainless steel and come in different dimensions in order to stock material in granulated form just next to the machine or in centralized systems.

Standard dimensions range from 100 to 1700 litres.

All models features wheels with brake, discharge slide gate, pipe for inserting a suction probe, grid for big-bags, cover.

Optional: flange for connecting an automatic feeder, material-level sensors, multi-way suction valves and metal grids for big-bags.
